- Angular.js
- AWS
- Agile Development
- Docker
- Node
- Express
- Postgres / Knex.js
- MongoDB
- TDD
- Sketch
- UX / UI Design
- WAI-ARIA
- HTML Canvas

PROJECTS

Doing Things Media

Built in React.js on top of AWS cloud services, this site serves as a video upload page for a social media personality with millions of followers. The site uses Amazon's DynamoDB, API Gateway, Lambda and S3 to store user data and content. This architecture provides a cost effective and scalable solution to growth in the user base and a safeguard against downtime during viral moments.

Qizzam

This group project, built with a React, Router, Redux stack with an Express and Knex.js back end, is a real time quizzing application that allows students and teachers to connect via web sockets to get a pulse check on the room. This app provides an open source, software solution to classroom polling.

SUMMARY

I am a mental health professional turned software developer who wants to combine my passion for helping others with a technical skillset offering the broadest possible reach.

My soft skills, acquired through a career spent helping those in need, combined with a strong and ever expanding technical skillset make me a dynamic team member and an ideal candidate.

I look forward to the continued development of my technical skills and a lifetime of learning.

I enjoy building lean, intuitive and thoroughly tested applications that add value to lives of others.

EXPERIENCE

Nov 2017 - Feb 2018 Software Developer

ScatterSpoke

Built APIs to handle third party integrations in Node
Built Slackbot to integrate with the platform
Added accompanying features to the frontend in Angular.js
